// ACHIEVEMENTS

- ▶ Won an internal NRT competition by building a 6-sheet Excel workload management tool with live dashboard formulas and self-updating indicators.
- ▶ Advanced Laravel course, Udemy — continuous project-based upskilling.

References & work samples available on request.

// PROFILE

Laravel/PHP full-stack developer with production experience across client websites, REST APIs, and business/ERP applications. Builds and maintains Laravel and WordPress/WooCommerce systems for university and enterprise clients, with independent freelance work supporting **1,000+ users**. QA background spanning Purchase Requisition, GRN, Inventory, Fee Management, and HR modules across multiple ERP systems.

// EXPERIENCE

Laravel Developer

NetRoots Technologies (NRT) · Lahore, Pakistan

DEC 2025 – PRESENT

- Developed Laravel pages, dynamic blogs, and admin CRUD panels for university clients including UCL and BHS.
- Maintain client WordPress/WooCommerce sites — resolved plugin conflicts, SMTP failures, and SEO/sitemap issues.
- QA testing on Cornerstone, MCJ, and OPF Laravel ERPs across Purchase Requisition, GRN, Inventory, Fee Management, and HR.
- Log structured Excel bug reports and coordinate fixes with the development team in an Agile workflow.

Full-Stack Web Developer

Freelance / Contract · Remote

SEP 2025 – PRESENT

- Built and deployed Laravel applications supporting 1,000+ end users in production.
- Designed RESTful, JWT-authenticated APIs with role-based access control, reducing payload size by ~40%.
- Optimized MySQL queries and indexing, improving response times by ~35%.

// PROJECTS

Learning Management System

stack: Laravel · MySQL · REST API · React · Chart.js

- Role-aware dashboards for Admin, Instructor, and Student with JWT auth and RBAC.
- Built course, lesson, and enrollment management on a Laravel REST API backend.
- Added Chart.js analytics and persistent UI preferences with dark/light theming.

Factory Management System

stack: Laravel · MySQL · REST API · Bootstrap

- Built ERP modules for articles, fabrics, inventory, invoices, and customers on a normalized MySQL schema.
- Automated invoice generation, cutting manual processing time by ~60%.
- Exposed a REST API for third-party integrations, with RBAC across user roles.
